EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In line 3 of claim 3, after "selected from" insert —the group consisting of—

The following is an examiner's statement of reasons for allowance: Applicants have claimed a method for aluminum cleaning according to present claim 1. The closest prior art of Aoki et al, US 5,382,295 teaches an aluminum cleaner comprising 1% sodium carbonate, 0.2% ATMPA, 0.3% sodium heptagluconate, 0.2% surfactant, and the balance water wherein the composition has a pH of 10.5 (col. 5, example 5). The reference, however, does not teach the specific addition of metallic ions. A question was raised in the previous action as to whether or not metallic ions are added to the composition, or are merely supplied by those naturally occurring in tap water, i.e. hard water, or supplied from a metal surface being cleaned. Applicants' amendment and response addresses this question and the examiner is satisfied that metallic ions are added as an active ingredient to the composition, in addition to whatever ions may be present as a result of the water hardness or metal being cleaned. That said, the prior art has not recognized the problem that applicants have solved, that is, that

fluctuation of metal ion quantities in the cleaning liquid directly influences the etching stability and uniformity during continuous operation and, as a result, causes pitting (or localized) corrosion of the aluminum container. Applicants have discovered that metallic ions selected from Ca, Mg, Mn, Fe, Zn and Cu, **added** to the composition, independent of the metallic ions which may or may not be present in the water, maintains a weight ratio of organic phosphonic acid and its salts to the one or more metallic ions (Ca, Mg, Mn, Fe, Zn and/or Cu) of from 100:0.05 to 20, and so avoids these etching problems. Such adjustment of metallic ions is not taught by the prior art and so the present claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles I. Boyer whose telephone number is 571 272 1311. The examiner can normally be reached on M-Th 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571 272 1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
